Use Cases for Insights

How to use Data in Assignar

Q&A

What is Insights?

- Insights is a business intelligence tool
- Connects data points, giving you a holistic view of your business
- Allows you to perform Data Analytics and Reporting

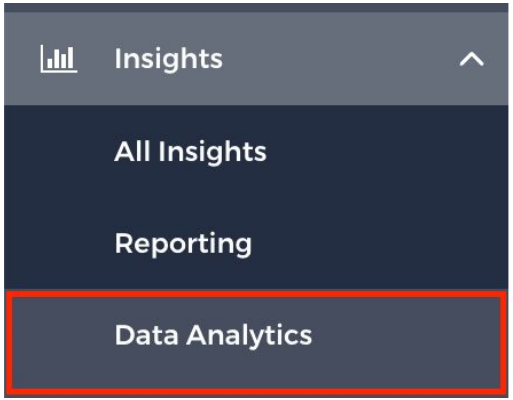
What is the difference between Data Analytics and Reporting?

- Reporting is the collation of data into an organised format
- Data Analytics involves using the same data to make informed business decisions

Reporting

- Typically small data windows (Within the last month)
- Required quickly
- Quickly analysed or actioned

Data Analytics



- Typically involves larger amounts of data from wider time frames
- Less importance on instant data availability
- Carefully analysed to shape business decisions

Which one should I use?

Use data analytics when....

Use Reporting when....

Why is this valuable?

- Having real time access to your information
- Doesn’t get lost on a truck
- You are being proactive - not reactive
- Increased visibility where you need it

Let’s take a look at Some Examples via Reporting

What are the most common occurrences that drive Reporting?

1. Fieldworkers are allocated to a job
2. Pre-start/Safety Check forms are completed
3. Timesheets are completed by the Fieldworkers based on their completed works

Do you have any standard reports built?

- Insights comes already loaded with a comprehensive suite of reports
- Reports can be copied, and customised as required
- List of reports is constantly being reviewed with new reports being added
